

Dover Fueling Solutions launches Tokheim Quantum™ 510M fuel dispenser series

Dover Fueling Solutions (“DFS”), a part of Dover Corporation that delivers advanced fuel dispensing equipment, electronic systems and payment, fleet systems, automatic tank gauging and wetstock management, is pleased to announce the launch of the new Tokheim Quantum™ 510M fuel dispenser series.

The Quantum 510M fuel dispenser range is the next generation of the acclaimed Quantum fuel dispenser family, introducing more models to choose from, with many new features. This dispenser family is led by the Quantum 510M FHR fuel dispenser with full hose retraction, which builds on the same look and feel of today's Quantum 510 fuel dispenser but with the added benefit of an enriched dispenser head. This new dispenser head will be standard across the range and will allow customers to easily upgrade from the typical LCD display to a VGA media display by simply changing the screen and the door.

Also in the series is the Quantum 510M SHR fuel dispenser with semi-hose retraction, featuring innovative modifications such as double bump piping to dramatically increase dispenser maintainability. This model provides an excellent cost option and ensures that customers have a much wider choice when it comes to modernizing their forecourts.

“With the Tokheim Quantum 510M fuel dispenser range, we have taken the classic and desired design features of the Quantum 510 fuel dispenser and redefined them for the future,” said DFS Vice President, Dispenser Business Unit, Lise-Lotte Nordholm. “Tokheim dispensers are industry recognized for quality and engineered for a lifetime of reliability, so we are thrilled be able to present our customers with even more model and feature options.”

In addition to the more conventional dispensers, DFS is introducing the Quantum 510M AdBlue fuel dispenser and the Quantum 510M liquified petroleum gas (LPG) fuel dispenser. The Quantum AdBlue fuel dispenser will have the same appearance as the Quantum 510M fuel dispenser with the enriched dispenser head, but for the first time it will be available as a four-hose model, a configuration which is a direct response to customers throughout the Europe and the Middle East. The Quantum 510M LPG fuel dispenser has been upgraded from the previous model to include the enriched dispenser head and semi hose retraction.
