

USA: Trillium to operate two CNG fueling stations in Dallas

The partnership with the City of Dallas adds to Trillium's five existing CNG fueling stations in the Dallas-Fort Worth area.

Trillium, a leading provider of alternative and renewable fueling solutions, is partnering with the city of Dallas to take over the operations and maintenance of two CNG fueling stations owned by the city, according to a company's press release.

The partnership adds to Trillium's five existing CNG fueling stations in the Dallas-Fort Worth area.

The stations are primarily used for fueling of heavy-duty sanitation vehicles. Trillium will be operating and maintaining the 26 slow-fill hoses used for overnight fueling at each station. There's also a fast-fill dispenser available at the Southeast Service Center for other City of Dallas CNG vehicles.

Others large locations where Trillium has municipal contracts include New York City, Oklahoma City and Cleveland.

Trillium, a member of the Love's Family of Companies, specializes in designing, building and operating alternative fueling solutions. Trillium operates over 200 alternative fueling stations nationwide. Combined, Love's Travel Stops and Trillium own nearly 70 public-access CNG facilities.
