

Petrol PLAZA

Space-saving solutions for vehicle washes

Kärcher is presenting a variety of special features from the vehicle washing technology area at the UNITI expo 2022, which takes place in Stuttgart, Germany, from 17th to 19th May. Under the motto "Kärcher - The brand for your success", the cleaning specialist is presenting itself as a system provider and partner in the sector who is offering individual complete solutions comprising machines and cleaning agents as well as advice and service, and thereby helping its customers to increase their efficiency.

The new products include an innovative entry-level class gantry car wash, which is an addition to the existing product range for vehicle washes. The robust wash system is extremely efficient and delivers extremely good washing and drying results simultaneously.

With the SB OB, Kärcher is also offering a highly compact self-service one bay wash for high-pressure washing of vehicles – particularly where space is limited.

With the new Kärcher power foam and the respective power foam lance, Kärcher is extending the wash range for self-service vehicle cleaning. The Kärcher power foam effectively dissolves dirt and remains of insects, thus achieving thorough and at the same time gentle cleaning of the vehicle.

With "Charlie", the cloud-based system, Kärcher is combining the "Charlie Fleet" fleet management system and the "Charlie Pay" payment solutions in one digital solution. Key data such as wash figures or revenue can be called up from any location and system parameters configured online.
