## 3A Composites - showing identity, innovative, contemporary corporate architecture

ONLY THOSE WHO SEE THE INVISIBLE CAN DO THE IMPOSSIBLE

BUILDING THE IMAGE

Conveying corporate identity internally and externally is multi-faceted: ranging from façades,

canopies and totems to interior design, store fittings and signage. No matter how multi-faceted corporate architecture is, the challenge facing companies, and the architectural offices and design agencies they commission, is sustainable implementation. Communicating brand values and the associated lifestyle over an extended period of time and all around the world is corporate architecture's task. It must respond with holistic and integrative answers on ecological, economic and social questions. Working closely with you, we have been dealing with these issues by offering a complete range of products for your CID-programme, from composite panels through to rigid sheet material. ALUCOBOND®, DIBOND®, FOREX®, KAPA® und SMART-X® stand for long-lasting colour fidelity and brilliance, excellent dimensional stability, easy processing and cost effectiveness. Giving you scope to implement your creative ideas.

## ALUCOBOND® DESIGN / DIBOND® DESIGN – INDIVIDUAL DÉCOR SURFACES FOR UNIQUELY POWERFUL COMMUNICATION

With individual décor surfaces ALUCOBOND® design and DIBOND® design accentuate indoor and outdoor applications such as façades, entrance portals and lobbies, canopies, façade strips, totems and pylons. New generation surfaces means architects and designers are able to create their own individual designs and yet retain the advantages and quality of tried and trusted materials. Individual décors, designed to suit customers' needs, can be produced on request. Due to the high flexibility and the quick realization, small lot sizes are also feasible. The decor effect can also be visualized using a simulation of your building project, at your request. Additionally, an exemplary design collection has been created in corporation with a design studio, which shows the range of options with ALUCOBOND® and DIBOND® design in different surface categories: Art / Fashion, 3D effect, Stone / Natura, Carbon, Concrete or Wood effect. The 3D effect and additional colour depth is pivotal in making every single decor so convincing.

During their life cycle neither ALUCOBOND® nor DIBOND® panels release any substances which are hazardous to the environment. They are completely recyclable and according to RoHS and REACH free of heavy metal. You can find further information regarding the life cycle assessment of these two materials on the previous pages.
