

US: New CNG station for buses opens in Indiana

TruStar Energy, which has services that include compressed natural gas fueling infrastructure, in conjunction with Energy Systems Group, said in mid-April it is excited to announce the opening of a large transit fast-fill CNG fuel station for Greater Lafayette, Indiana.

CityBus currently runs a total of 10 CNG-powered buses.

The CityBus fast-fill CNG fueling station is the second project where TruStar Energy teamed up with Energy Systems Group, an energy services provider for government, education, healthcare, commercial and industrial entities.
