

## OPW Releases New AVANCE™ Nozzle Configurator

**OPW, is pleased to announce the official launch of a digital configurator for its AVANCE™ nozzles.**

The AVANCE Configurator, which allows users to virtually build any AVANCE nozzle and all available accessories in an easy step-by-step process, is available in a mobile- and desktop-friendly version and can be found by visiting [www.avanceconfigurator.com](http://www.avanceconfigurator.com).

"OPW products and customers work and live in different countries, continents and time zones. Customers need to be able to access the right information when and how it is convenient for them," said Fred Hess, Director Sales for OPW Fueling Components EMEA. "The AVANCE Configurator allows customers to select any type of AVANCE nozzle and desired spout, weather rating, safety cap, guard latch, color, swivel and breakaway all from their favorite Internet-enabled device, 24-hours a day."

As OPW advances nozzle design to match petrol types and regulations around the world, the number of accessories increases. To that end, OPW's AVANCE Configurator has been specifically designed to help ensure customers understand every option available and aid in the convenient selection of OPW AVANCE nozzles and accessories. Beyond allowing users to build AVANCE nozzles online, the configurator also enables customers to save and compare configurations for future orders. And, with every configuration created, an authentic OPW part number is generated to guarantee convenient ordering. OPW will continue to update the online tool as soon as new nozzles and accessories become available (swivels, breakaway valves and swivel/breakaway combinations released in July have been uploaded to the configurator).
