

Petrol PLAZA

News from Bever Innovations

Bever Innovations enters South East Asia

LED innovator Bever Innovations widens world-wide FOCUS on Petrol with subsidiary in Malaysia.

“We are delighted to announce that per August 2015 we have opened a subdivision in South East Asia. This expansion is a great- but logical step for our Dutch company. With the Southeast Asia’s primary energy demand, we expect rapid enlargements in energy consumption, supported by strong economic growth and rapid urbanisation. Also strong growth in the vehicle stock pushes oil companies to expand their number of petrol sites in the coming years. Bever Innovations sees great potential to enlarge the global coverage and market share in the coming years. We are also confident that this new subdivision will play a major role in servicing customers’ needs. This new operation will strengthen Bever Innovations ASEAN presence and make it easier to act as a reliable, innovative and proactive partner in the region. It will also improve our capacity to service customers with our high-end LED products and to tailor to the needs of our clients – one of the most appreciated strengths of Bever Innovations around the world”.

Via the Malaysian office, Bever Innovations will offer directly their high quality LED products. Business

development and commercial support will be supported by mr. Kelvin Ohng. There will be close contact with sales support, which is based in the Netherlands.
