

## Shell and Ryder cooperate in LNG vehicle expansion

**Shell Oil Company has announced a new agreement with Ryder System, a commercial fleet and supply manager, for LNG heavy-duty vehicles supporting oil and gas logistics operations in the U.S.**

The new 15 LNG fueled vehicles will replace Ryder diesel-powered vehicles in the existing fleet and will be serviced out of Ryder's Lafayette, Louisiana, facility. As part of the 5-year deal, Shell will supply LNG fuel for the dedicated natural gas fleet.

"We are excited to work with Ryder to transfer diesel vehicles to LNG. LNG can be a good choice for truck owners and more are making the switch to LNG," said Dan Flynn, Shell Vice President Logistics.

Ryder is the leader in natural gas vehicle solutions for the commercial transportation industry, with 18 natural gas vehicle maintenance facilities and more than 6,000 natural gas vehicle trained maintenance and support personnel. The company operates LNG, CNG fuelling stations in California.

"We are honored that Shell trusts Ryder to represent their brand on the road and with their customers, and that we can help them improve the sustainability and efficiency of their fleet," said John Diez, President of Ryder Dedicated Transportation Solutions.
