

Puma Energy launches new line of lubricants

Global fuels company Puma Energy has launched a new line of lubricants that sets new standards for the industry, according to a company release.

The new line of high performance lubricants has been developed with the latest technology to offer greater protection and lower fuel consumption, explains Puma Energy.

“Our focus is to guarantee that our clients, businesses and consumers get the best lubricant in the industry that cuts operational costs and increases performance. That is why we have invested in advanced molecular technology to develop specific lubricants,” says Govert Spit, Global Manager of lubricants for Puma Energy.

Motorists will be able to find the new lubricants in the 1,240 Puma Energy gas stations spread across ten South American countries, as well as in the 2,300 service stations it has in the rest of the world.
