

## PetrolPlaza Special Cloud-based solutions: Handle transactions and manage your sites easier and quicker with the Tokheim Cloud

The new cloud services from Tokheim was one of the major technologies and innovations demonstrated at this year's UNITI expo.

Offering one, central online portal, our customers will be able to view and handle all the purchases and transactions on various types of devices, be it a PC, tablet or smartphone, with no more need for different user accounts and local installations on PC's. Thanks to its responsive design, the portal will always be displayed in an optimal and user-friendly way.

*"The Tokheim cloud solution provides a direct access to the station alerts and transactions."*

The Tokheim cloud solution provides a direct access to the station alerts and transactions and allows programming of the fuel prices. You can and will receive live updates and be able to manage your business remotely and more efficiently. With price-signs, car wash, tanks, fuel dispensers, payment terminals and security all connected to the cloud you can stay open for longer and make your business more profitable and customer friendly.
