

NEW INCON® DIGITAL INVENTORY & LEAK DETECTION PROBES NOW AVAILABLE

Franklin Fueling Systems announce the launch of our new INCON® brand digital inventory and leak detection probes.

Built on our solid LL2 model probe platform, these new probes feature enhanced data communication capabilities and a new tank bottom mount design. Both of these new features allow for faster installation and setup.

The new probes feature an innovative integrated vibration motor built into the probe head, which combats static friction (stiction) between the probe shaft and float. Naturally occurring stiction can cause the float to remain in place when the product level drops, negatively affecting the accuracy of tank level readings or leak detection.

HIGHLIGHTS

The new digital probes now automatically send important setup data to the tank gauge eliminating manual input by technicians. This data includes:

- Probe gradient
- Probe type
- Probe length
- Serial number

These new probes are available to order immediately.
