

Germany: Air Liquide opens 5th hydrogen fuelling station

Air Liquide opened its fifth public hydrogen station in Mülheim an der Ruhr las Tuesday in partnership with Orlen.

After the stations opened in Düsseldorf and recently in Offenbach am Main, Kamen and Limburg an der Lahn, the Mülheim station is the fifth station installed by Air Liquide in Germany within the framework of the Clean Energy Partnership (CEP).

The H₂ station designed by Air Liquide is integrated into a 'Star' petrol station already operated by Orlen. Open to the public, it enables to fuel around 40 fuel-cell electric vehicles per day in less than five minutes with an average driving range of 500 kilometers.

This new station marks an important step in the construction of a nationwide network of 400 H₂ stations across the country by 2023, within the framework of the Clean Energy Partnership and H₂ Mobility with the support of the German government and the European Union.
