

Mobility Plaza®

IPT

For half a century, **IPT** has been a leader in the manufacturing and application of positive displacement pumps and meters in Turkey. IPT formerly known as Ismet Petrol, was founded in 1958 and has always been the leader in its field for 50 years and is always recognised and distinguished by the quality and reliability of its products.

IPT has been committed to serving specific industries where our positive displacement pumps and meters offer the best product life cost cycle possible. We have expanded our offering of products beyond pumps and meters to include the technologies you demand. Today our product solutions fit multiple industries.

While our main products are fuel counters and fuel pumps, transfer sets, dispensers and service within these areas, products of **IPT** are used in a variety of industries including LPG, chemical processing, refined fuels, petroleum, food & sanitary and the mobile transport industries.

To come up with a really good product demands plenty of knowledge and fresh, innovative ideas. Yet most important of all is to listen to our customers needs and requirements. So that we can see what can be improved and identify things that are not working optimally. Only then we can create something new – and that actually makes a big difference for you.

IPT is an entrepreneur and progressive company that passes the ISO 9001 system for all company activities in 1997, get the ATEX certificate for meters and pumps in 2008 and MID certification for meters in 2015.
