

## 18th Vessel Efficiency & Fuel Management Summit

- What are the solutions for Ship Owners?
- What it means for the refiners?
- Alternative Fuel Options & will there be sufficient compliant fuel available?
- What Technologies are there to curb filter Emissions?

All these questions would be answered at ACI's 18th Vessel Efficiency & Fuel Management Summit will provide essential, expert guidance to shipowner/operators on how to scrutinise the technologies available & Fuel alternatives to assist with complying with the Sulphur 2020 cap deadline. It would provide an ideal platform for stakeholders from the Maritime industry, including Shipowners, Ship-managers and associated solution providers, fuel solutions, IT and data associations, consultants, and technology providers to converge. Bringing the pioneers together the conference aims to promote the methodologies, exchange of ideas and the way forward to commercialization.

70+ industry professionals will come together to unravel the Sulphur 2020 mesh, discuss successful system installations, share solution driven case studies to handle technical and operational aspects and create resilient fuel emission strategies.
