

UNITI Mineral Oil Technology Congress 2015

Specialists of the lube and fuel sector as well as experts of the mechanical engineering and automotive industry meet at the international congress of UNITI-Mineralöltechnologie GmbH to discuss current trends and future developments in the industry.

The topics include the most recent industry trends of lubricants and fuels from research to practical applications. A get-together evening offers further possibilities for expert discussions. Especially the active presence of the automotive industry is again and of great importance for the congress. The congress offers an excellent platform for an exchange of experiences and networking. This open dialogue of the entire mineral oil and additives industry with other stakeholders e.g. automotive industry, is valuable for all participants. Besides the presentations this is reflected in the following discussions, which will be continued during the communication breaks.

For the first time ever, two pre-seminars are offered in the afternoon prior to the congress. Thus, participants may benefit even more from the information and ideas they acquire from attending the congress at no additional costs.

Furthermore, a professional exhibition (exclusively for participants) gives comprehensive information on new products and services.

The UNITI Mineral Oil Congress will be a good opportunity for participants to inform themselves fast and easily about innovations, future demands and developments to push ahead both the personal and the company's success.
