

## IOSF 2019 - International OpEx & Safety Forum

Euro Petroleum Consultants are delighted to announce the launch of International OpEx & Safety Forum taking place in London 15-16 January 2019. IOSF 2019 will be the meeting place for the oil & gas industry to gather and discuss the important subjects of operational excellence and safety impacting all areas of the industry. Our internal industry consultants will work alongside a senior level Expert Panel to develop an agenda that is engaging and informative for all attendees. IOSF will be a true industry event, developed by the industry, for the industry.

*"A high level of operational efficiency has always been of great importance for oil, gas and petrochemical industries. Companies invest billions of dollars in high-quality assets acquisition, while the return on investment is only possible if plants are operated safely and efficiently. In recent years we have witnessed high volatility in oil and gas prices, so the importance of operational excellence is higher than ever." Colin Chapman, President*

It is now a given that striving towards Operational Excellence is critical for oil, gas and petrochemical operators as well as for the manufacturing and industrial sectors in general. Operators need to increase their margins and tightly control costs, whilst ensuring that safety and reliability are not compromised. Effective leadership is essential in managing the process of continuous improvement and ensuring that employees are empowered with data, information and procedures transparently in a role-based manner to assist in fast, accurate actions which lead to consistently good decisions.

It is also widely acknowledged that organisations must develop their technical safety path, focusing on their plant, safety, reliability and human interfaces in order to achieve the target of no surprises and zero accidents. A focus on safety is the number one priority for companies, with operators, manufacturers, suppliers and consultants developing innovative and effective solutions in these areas.

Join us at IOSF 2019 where major international operators will share case studies that outline their challenges, successes and key learnings. We will also hear from industry leaders, solution providers and key consultants on the latest trends, tools and techniques that will help drive us to achieve even greater levels of operational excellence improvements, allowing companies to innovate in the areas of 'people', 'process', 'assets' and 'technology'.

It is also widely acknowledged that organisations must develop their technical safety path, focusing on their plant, safety, reliability and human interfaces in order to achieve the target of no surprises and zero accidents. A focus on safety is the number one priority for companies, with operators, manufacturers, suppliers and consultants developing innovative and effective solutions in these areas.
