

## IBM Services transforming Vivo Energy with new software

**SAP S/4HANA fuels future growth by boosting efficiency and unlocking operational insight.**

IBM announced that Vivo Energy has selected IBM Services for its digital transformation journey based on SAP S/4HANA.

A rapid start to the relationship has already led to the completion of a major project milestone with two out of fifteen of Vivo Energy's country locations transferred to SAP S/4HANA to help boost efficiency and unlock operational insights.

Since its establishment in 2011, Vivo Energy has rapidly grown, adding more than 500 service stations to its retail network between 2012 and 2017, while opening more than 450 convenience retail and quick service restaurants between 2014 and 2017.

"We are focused on continuing our remarkable growth story, and to achieve this, we decided to transform our approach to business management and look for ways to enable the comprehensive operational insight that we desired," said Mike McCormik, CIO, Vivo Energy.

IBM solutions have started to transform Vivo Energy's operations, enabling it to streamline processes, enhance employee productivity and improve data visibility.

SAP S/4HANA will predict demand for particular products and automate replenishment at the service stations.
