

Endesa inaugurates its first “gasinera” station in the Region of Murcia

The vehicular natural gas station is located in the installations of the Campillo Palmera transport company in the town of Molina de Segura.

Endesa has just inaugurated a new natural gas station in the town of Molina de Segura. This station is the first in the Murcia Region and is located in the facilities of Campillo Palmera, the main customer of the “gasinera” station and one of the main transport and logistics companies in Spain, with a fleet of over 500 of its own lorries.

The inauguration featured the presence of the President of the Murcia Region, Mr Fernando López Miras, who underscored the “commitment of the regional transport sector to sustainable mobility and respect for the environment”.

The new natural gas station has a 60m² LNG plant and two gas pumps. Another phase of the project is the installation of a CNG pump, while the third phase will see the commissioning of another additional deposit and another LNG pump.

Molina de Segura is one of the main operating bases of logistics and transport in Spain, with a ‘transport city’ that features 29 logistics companies and 164 transport companies, in addition to dealerships of the main brands of heavy vehicles.
