

Spain: Endesa to install EV chargers at Andamur's service stations

As part of energy provider Endesa's ambitious plan for a mass rollout of electric vehicles charging infrastructure, Andamur petrol stations will now be equipped with the technology.

Endesa X and Andamur have signed an agreement to deploy recharging infrastructure for electric vehicles in the six service stations it has in our country. The agreement includes the deployment of fast and ultra-fast charging points.

This alliance was signed on Wednesday at Endesa's headquarters in Madrid by Josep Trabado, general manager of Endesa X, and Miguel Ángel López, CEO of Andamur.

"Last November we announced the most ambitious plan that has ever existed in our country for the development of electric mobility. With the agreement we signed today, we are demonstrating with facts that we are on the right track in our goal of ensuring that any driver, wherever they are, can move freely throughout the country in an electric vehicle," explained Josep Trabado.

Initially, work will begin on the San Román and Pamplona service stations, and is expected to begin later this year. In them, Endesa X will install two fast charging points with a power of 50 kW.

All the recharging points will be connected to a digital platform that allows interoperability and remote control of the points.
