

New Neste commercial fuelling sites now open in California

The Finnish retailer now has three more stations in the environmentally-friendly U.S. state

Fleet drivers in Northern and Central California can now fuel up at multiple commercial fuelling sites with high-performance, low-carbon Neste MY Renewable Diesel after the opening of three new locations.

The new Neste stations join the first location in San Leandro, California, which opened in March 2019.

Made by the world's largest producer of renewable diesel fuel, Neste MY Renewable Diesel is produced from 100% renewable and sustainable raw materials that cut greenhouse gas emissions.

To date, the four cardlock locations offering Neste MY Renewable Diesel have helped customers to reduce their greenhouse gas emissions by at least 79,000 metric tons. This figure equals the removal of over 16,000 passenger cars from the roads for a full year.

"We are happy to announce these new locations for our high-quality and low-carbon Neste MY Renewable Diesel," said Jeremy Baines, Vice President of Sales for Neste U.S. Inc.

Neste MY Renewable Diesel is also available to public and private fleets in California through authorized distributors.
