

New hydrogen filling station in Germany

The refueling site will be operated by H2 MOBILITY at Hamburg Airport.

H2 MOBILITY Deutschland has announced a further location for a hydrogen refuelling station: Hamburg Airport, Weg beim Jäger 193. In addition to 74 hydrogen filling stations that are already in operation, a further 29 are being planned and built throughout Germany.

The station will be integrated into a Shell station, the technology comes from Air Liquide.

The new H2 filling station is supported by the National Innovation Programme Hydrogen and Fuel Cell Technology (NIP) of the Federal Ministry of Transport and Digital Infrastructure (BMVI).

The choice of locations follows the overall network planning of H2 MOBILITY Deutschland, according to which the first 100 hydrogen stations will be built in seven conurbations (Hamburg, Berlin, Rhine-Ruhr, Frankfurt, Nuremberg, Stuttgart and Munich) as well as along connecting trunk roads and motorways.
