Discover Bertotto Boglione's portable gas stations

Bertotto was present at the NACS PEI Show, where they had the opportunity to present one of their latest innovations, portable fuel stations. “We have had the opportunity to meet with our distributors and representatives from different countries,” says Carlos Rubbi, Head of Foreign Trade at Bertotto, “Our products today are at low production costs in Argentina, so we can offer them at competitive prices globally” added Mr. Rubbi.

The portable fuel stations developed and manufactured by Bertotto Boglione S.A. are specially tailored for new routes and new market development points for major oil companies.

The stations are also suited to specific markets with volumes in the range of 100,000 to 200,000 litres per month like in the case of agricultural cooperatives, land works, supermarkets, new urban developments, commercial centres, mining, oil areas, etc.

Another use is the circuit of fuel consumption for authorities such as the national state, provincial states, decentralized municipalities and organisms with volumes superior to 400,000 lts/month that due to logistic, operative and administration requirements need the centralization in storage units and fuel office with system of fleet control.

Bertotto Boglione portable service stations are manufactured under international standards ISO 9001: 2015 and UL 2085 (Protected tanks) licensed by STI F941, NFPA 30A. for fuels Class I (Gasoline, AV Gas etc) and under UL 142 standards for fuels Class II (Diesel, Jet A1, Kerosene, etc).

Some of our portable station customers are Petrominera Chubut and YPF (Argentina), COPEC (Chile), PDVSA (Venezuela), Sonangal (Angola), as well as mining companies, road companies and agricultural companies.
