

Total will install and operate up to 20,000 new EV charging points

The global energy company has landed Europe's largest concession contract for electric vehicle charging infrastructure.

'Metropolitan Region Amsterdam Electric' (MRA-Electric) has awarded Europe's largest concession contract for electric vehicles charging to Total. Under this agreement, Total will install and operate up to 20,000 new public charging points in the Netherlands, in the three provinces of North-Holland, Flevoland and Utrecht.

This new contract intends to address the fast growing demand for public electric vehicle charging points in the Netherlands. This EV charging network covers a population of 3,2 million inhabitants and around 15% of the current Netherlands EV charging demand.

Total Netherlands' is already the main EV charging operator in the MRA-Electric region, with over 4 500 public charging points under operation and accessible to the public. The size of this new contract makes it the largest ever in Europe.

"For Total, providing the Dutch EV drivers with such reliable charging infrastructure and services, powered by clean and renewable electricity, is a significant and unprecedented step toward sustainable mobility. It is in line with our ambition to operate 150,000 charging point by Europe by 2025 and to become a major player in the electric mobility business," said Alexis Vovk, President for Marketing & Services and Member of the Executive Committee at Total.

The Total network currently has around 350 service stations in the Netherlands.
