

Petrol PLAZA

AdBlue® by BASF

AdBlue® by BASF is the best AdBlue produced only from hot melt urea in a dedicated facility.

It is recommended by major diesel engine manufacturers. The use of AdBlue® by BASF ensures that the duration of the SCR after-treatment system is equivalent or superior to that one of the vehicle.

10 litre cans with protected and dedicated spout for each individual can:

- Can with double label
- Single batch number stamped on each container
- Nr 90 cans per pallet for a total of 900 litres/pallet
- Specific spout for each can
- New wood pallet

205 litre drum (4 drums pallet) 1,000 litre IBC (plastic IBC with wood pallet). Every drum and every IBC is accompanied by a certificate of analysis of the product contained to safeguard the buyer

Gravity kit - Manual pump - Electric pump

Use only approved and dedicated objects to guarantee proper functioning of the AdBlue® system
