

OnTurtle suma ocho nuevas estaciones de gas natural a su red internacional

La compañía sigue apostando por el GNC y GNL en su red de estaciones de servicio internacional para dar respuesta a una movilidad alternativa.

In its commitment to natural gas vehicles, OnTurtle, a reference partner in Europe for transport companies, adds eight new CNG and LNG stations to its international network.

Last March the company incorporated new stations in partnership with MOLGAS Group, a leading company in energy services with over 20 years of experience in the sector. In addition, OnTurtle added several gas stations of the HAM Group to its own international network. In total there are 52 self-service and unmanned natural gas stations throughout Europe.

Its gas refueling network to the transport sector is distributed in 24 points in Spain, 22 in France and 6 in Belgium.
