

ADNOC launches new lubricant range for hybrid engines

ADNOC VOYAGER vehicle engine oils are the UAE's first to meet the new API-certified engine oil standards.

ADNOC Distribution, the UAE's largest fuel and convenience store retailer, has launched a new range of lubricants for hybrid vehicles. ADNOC VOYAGER vehicle engine oils are the UAE's first to meet the new engine oil standards certified by the American Petroleum Institute (API).

The new range of ADNOC VOYAGER comprises VOYAGER Star Plus HB, and the advanced VOYAGER Star Plus Eco engine oil, which is compatible with vehicles manufactured since 2002, including American, Korean, Japanese and European manufactured vehicles.

The launch of ADNOC Distribution's latest VOYAGER range follows three new oil standards set by the International Lubricant Specification Advisory Committee (ILSAC). The new standards, introduced by the API on 1 May 2020, are designed specifically for hybrid vehicles and the new VOYAGER range is one of the first globally to meet these new international standards.

“We are proud to be one of the first companies in the Middle East to introduce the latest international standards in vehicle oil technology to the UAE and also to some of our core export markets in the GCC as well as throughout Africa and Asia,” commented ADNOC Distribution’s Acting Chief Executive Officer, Ahmed Al Shamsi.

ADNOC VOYAGER engine oils are available to consumers as well as commercial fleet operators and the construction, manufacturing, marine and power generation sectors. The offering comprises automotive and marine engine lubricants, automotive gear and transmission fluids, and industrial lubricants and greases.

The VOYAGER lubricants are currently available at ADNOC Distribution stations and are exported to distributors across the GCC, Africa and in Asia.
