

DFS partners with Bilpa for the provision of its wetstock solutions

With the addition of the Fairbanks fuel monitoring service, Bilpa can increase its offering to the circa 500 fuel stations in Uruguay.

Dover Fueling Solutions (DFS) has announced a new agreement with Bilpa S.A. for the provision of its Fairbanks wetstock management services to the Uruguay and Paraguay markets.

Bilpa is based in Montevideo and is a longstanding DFS distributor of Wayne products, as well as those of ProGauge and Dover sister company OPW predominantly selling fuel dispensers and nozzles, swivels and hoses etc. throughout the region.

With the addition of the Fairbanks fuel monitoring service, Bilpa can increase its offering to the circa 500 fuel stations in Uruguay, starting with a significant historical data analysis pilot for a leading oil company. The new service will assist site owners to comply with the recently introduced underground storage tank control measures, with both the service itself and the accompanying reporting seen as a positive contribution towards conformity.

“We are honoured to be able to add the Fairbanks expert monitoring service to our offering. With the introduction of the new regulations surrounding SIR leak detection, the service will be an extremely sought-after addition from our customer base. We look forward to working with DFS for years to come,” Walter Dura, President of Bilpa.
