

Enel X, Hubject to streamline payment solutions for e-mobility

The companies team up to provide integrated end-to-end financial B2B settlement services between charging point operators and e-mobility service providers.

Enel X, through Enel X Financial Services, its subsidiary specialized in payment solutions, will enable financial settlement services between charging point operators (CPO) and e-mobility service providers (EMP) on Hubject's world leading eRoaming platform.

The solution "intercharge SETTLEMENT" is the first fully integrated end-to-end financial B2B settlement service within the e-mobility sector, and it allows CPOs to directly determine the B2B tariffs for charging processes as well as automating the invoicing and billing process with EMPs.

"The Fintech platform we have implemented opens the way to new business models enabling interoperability between different ecosystems," said Giulio Carone, CEO of Enel X Financial Services.

"We are excited to work with Enel X to offer an unmatched service level and quality to all the 750+ partners on our eRoaming platform. One of the biggest challenges in the EV charging industry with lots of manual hours and spreadsheets every month can finally be considered solved," commented Christian Hahn, CEO of Hubject.

Hubject has developed an interoperable platform of EV charging points that enables drivers to fill up their cars across a network of 250,000 public charging points worldwide, without having to sign new contracts on top of the ones with their EMP.

Enel X is expected to increase its network of public and private charging points made available worldwide, also through interoperability partnerships, to approximately 736,000 by 2022 from around 130,000 today.
