

USA: ExxonMobil to roll out contactless pay-at-pump technology

All 11,500 Exxon and Mobil stations in the U.S. will have NFC and QR codes at the pump.

ExxonMobil is rolling out a NEW 2-in-1 contactless payment solution using NFC technology and QR codes to meet the increasing demand for mobile payment options.

Over 11,500 Exxon and Mobil stations across the U.S. will have this new technology at gas station pumps by end of year to enable customers to “point and pay” using their smartphones.

Drivers can simply tap their smartphone to scan the QR code to pay. Then, the customer authorizes payment using Apple Pay, Google Pay or the Exxon Mobil Rewards+ app and selects the fuel grade. For those that already have the app, the technology intuitively opens the app to proceed with secure payment.

This marks another technological advancement rolled out at Exxon and Mobil stations this year such as Amazon’s “Alexa Pay for Gas”.
