

Gasum opens a new gas filling station in Southern Sweden

The new site is the second of its kind for liquefied gas in Helsingborg city, increasing the availability of low emission fuel options in Southern Sweden.

Gasum opened a new gas filling station in Helsingborg, increasing the availability of low emission fuel options in Southern Sweden. The new site will provide LNG and LBG for heavy-duty vehicles, and is the second of its kind for liquefied gas in the city.

Helsingborg is one of the biggest logistics hubs in the Nordics and a major food distribution center for Sweden. The station is located at Transportgatan 2A, beside the E20/E6 and E4 highways that together connect Helsingborg to east coast on the other side of the country.

“By expanding the Nordic gas filling station network, we are making alternative fuels available to more and more companies. Transport and logistic companies need to lower their emissions and LNG is one the most cost-efficient and fastest ways to do this,” says Mikael Antonsson, Director Traffic at Gasum in Sweden.

Gasum is developing the gas infrastructure and filling station network across the Nordics. By the early 2020s, the company is aiming to create a network of 50 new HDV gas filling stations in Finland, Sweden and Norway. In these countries, there is already a network of 35 filling stations selling liquefied gas.
