

Chile to have its first LNG station

HAM Chile and Lipigas Companies will built the first fuelling station for transport running on LNG.

HAM Group and Lipigas Companies will build Chile's first liquefied natural gas (LNG) gas station. This will be located near the Pan-American Highway in Chile), which is part of the country's main land communication artery.

The project has been possible due to Lipigas' commitment to LNG with the aim of contributing to sustainable development with alternative fuel stations.

The new service station will allow the continuous supply of LNG to a fleet of 30 trucks from Cervecera AB InBev Chile, which will be incorporated into the transport fleet of Transportes San Gabriel.

Lipigas is a relevant player in the energy market in Latin America, with a presence in Chile, Colombia and Peru.

HAM Chile Spa has been operating for several years in South America, with its own facilities and staff in the Santiago metropolitan region, which allows HAM Group to continue its expansion.
