

Total and ADNOC sign agreement on CO2 emissions reduction

Both companies will also collaborate in the area of carbon capture, utilization and storage.

Total signed a strategic framework agreement with the Abu Dhabi National Oil Company (ADNOC), to explore joint research, development and deployment partnership opportunities in the areas of CO2 emission reductions and carbon capture, utilization and storage (CCUS).

The agreement brings together low carbon technologies from ADNOC and Total, and expands on the long-standing partnership and collaboration between the two leading energy producers across the full value chain.

“The agreement builds on our sustainability goal to decrease greenhouse gas (GHG) intensity by 25% by 2030 and reinforces ADNOC’s commitment to responsible oil and gas production as we deliver on our 2030 smart growth strategy. We look forward to leveraging this expertise and collaborating with Total to further research and develop low carbon technologies and sustainable growth opportunities,” said H.E. Dr Sultan Ahmed Al Jaber, ADNOC Chief Executive Officer.

Under the terms of the agreement, ADNOC and Total will jointly explore opportunities to reduce CO2 emissions, improve energy efficiency and the use of renewable energy for oil and gas operations. In the area of CCUS the companies will further develop joint research into new technologies covering carbon capture, storage solutions and enhanced oil recovery projects based on CO2 usage.

development of innovative solutions and business models towards the CCUS chain. This is a perfect example of Total’s commitment to leverage its global presence and expertise to act towards its 2050 net-zero ambition alongside its long-standing key partners,” said Patrick Pouyanné, Chairman & CEO of Total.
