

France: Atawey opens largest hydrogen station in Normandy

Atawey will install 9 hydrogen stations in Normandy as part of the region's hydrogen mobility program EAS-HyMob project.

Green hydrogen company Atawey continues building a network of hydrogen stations in France with the inauguration of the largest hydrogen charging facility in Normandy region.

Located at Evreux, the new hydrogen filling facility will be “the most important and the most versatile” of a 9-station network that Atawey is deploying in Normandy as part of the hydrogen mobility program EAS-HyMob, according to a company's press release.

With a capacity of 50kg, Evreux filling station is the only one in the network capable of supplying a fleet of more than 20 cars. It is also the only dispenser in Normandy with a double pressure terminal (700 bars and 350 bars).

The Eas-HyMob project (Easy AccesS to Hydrogen Mobility) is part of the Normandy Region's hydrogen mobility program initiated in 2016 with the goal to strengthen the role of hydrogen in the

energy transition.

Founded in 2012 by Jean-Michel Amaré and Pierre-Jean Bonnefond, ATAWAY designs and manufactures turnkey autonomous green hydrogen refueling stations.
