

Wolftank-Adisa launches Wolftank Hydrogen GmbH

With an increasing level of public and private investment, the supplier has decided to establish a separate unit of its business dedicated to hydrogen.

Austrian supplier of environmental solutions Wolftank-Adisa Holding AG has decided to bundle together its experience and activities in the field of hydrogen into Wolftank Hydrogen GmbH, which will look to contribute actively and sustainably to the development of the European hydrogen infrastructure.

The number of public and private investment has increased hugely over the last years in Europe. The Hydrogen Initiative, an Austrian collective project supported by the European Union, will look to maximise the potentials of sustainable hydrogen technology for the decarbonisation of multiple sectors.

"Our technologies, some of which have already been used for years in hydrogen supply, enable an energy-efficient link between green hydrogen production plants and the end user in both small and large networks. Whenever I visit our branch in Bolzano, I am pleased to look at the highly visible hydrogen filling station we were able to help build and which has been reliably refuelling hydrogen vehicles for over 10 years," says Dr. Peter Werth, Group CEO.

The Wolftank-Adisa Group is already a member of the European Clean Hydrogen Alliance of the European Union.

Depending on the technical design, a hydrogen refuelling system is traded at between 2 million euros and 3 million euros, according to the company.
