

Gasum expands network in Southern Finland

Järvenpää station supports the existing network of gas filling stations in the neighboring areas of Hyvinkää, Riihimäki and Porvoo.

Gasum is strengthening the network of gas filling stations in Southern Finland with the opening of its newest location in Järvenpää. Located in the proximity of the Lahti motorway, the filling station serves passenger cars and medium-duty transport vehicles in the area with compressed biogas and natural gas.

Järvenpää station supports the existing network of stations in the neighboring areas of Hyvinkää, Riihimäki and Porvoo, according to Gasum.

The new station will enable increasingly more residents of Järvenpää and entrepreneurs in the area to refuel with user-friendly and environmentally friendly fuel, says Gasum.

Recent years have seen rapid growth in the popularity of gas in Finland. The Finnish Government has

set the target of 50,000 gas vehicles on Finland's roads by 2030, but the rapid increase in gas-fueled vehicles suggests this target will be met ahead of time, according to Gasum.
