Mobility Plaza®

Supercharge your business with PetroSol

The PetroSol Team has started the year with a greater focus on helping our Customers improve their profitability, decrease costs and optimize their general activity by implementing assistive Machine Learning into all our solution. As a first step, Machine Learning assistance will help the Station Managers to optimize their stocks by proposing the best ordering quantities for each product based on historical sales taking into considerations seasonality, national holidays, major events, weather state and other available variable parameters.

Security is also in our top priorities, with our Team in advanced stages of implementing Block-Chain based traceability for sales and operations documents, providing tamper proof records all the way. This kind of improved security is adding up to current retainment of who-made-what maximum granularity.

For our current and future Customers, we have great news, with many new features implemented and ready-to-roll in production as of today:

- Integration with automatic Coffee Machines (the product is delivered only after a sale was finalized at the POS)
- Outdoor Payment Terminals with a specialized Kiosk printer are now Fiscally Certified in Romania (in partnership with Danubius Exim)
- Payment of Road Taxes for Romania and Moldova
- Payment of Utilities Invoices for Romania
- Charging of Pre-Paid Mobile Phones and other communication devices
- QR-code based Mobile Payments

Continuing the strategic partnership with Danubius Exim (Datecs Ltd exclusive representative for Romania), we launched PetroSol OPT – the first complete certified fiscal solution for unattended petrol stations accepting all payment methods (Cash, Bank Cards, Fleet Cards, Loyalty Cards, Change Voucher). PetroSol OPT is unique in Europe by having a fiscal certification (with Datecs SK1-21 kiosk fiscal printer) while allowing partial usage of a Change Voucher and mixed payments between Cash and one or multiple Change Vouchers.

PetroSol OPT can accommodate one to many dispensers and all existing business models: Fast Lane, Night Mode or Full Unattended. For payment and loyalty, it can function with all our cloud-based applications – PetroSol CMS, PetroSol Loyalty, PetroSol CVHO or integrated with 3rd party systems. Get in touch with us to learn more!
