

Cepsa, Redexis open their third NGV station in Spain

In the first few months of 2021, both companies plan to start up another four gas filling stations in some of the country's main transport corridors.

Cepsa and Redexis have started operating their third refueling station for natural gas vehicles (NGV) in Spain. Located in Trujillo, the facility supplies both compressed natural gas (CNG) for light vehicles and liquefied natural gas (LNG) for heavy-duty transport.

The station is part of the [strategic agreement announced in 2019](#), by which both companies committed to create the largest network of LNG and CNG refueling stations in Spain.

Under this agreement, Redexis committed to making an investment of 60 million euros in the 2019-2023 period to undertake the construction and maintenance of 80 gas stations located at Cepsa service stations, which Cepsa will be in charge of supplying and marketing.

In the first few months of 2021, both companies plan to start up another four gas stations in some of

the main national transport corridors; specifically, they will be located at Cepsa service stations in the provinces of Madrid, Cuenca, Jaén and Salamanca.

Trujillo is a strategic location for the transport of goods through which more than 2,500 heavy vehicles circulate daily. It is a communications hub linking Portugal and Spain, and opens the exit route for Portuguese transport to the rest of Europe, connecting Madrid and Lisbon.
