

## Neste launches Neste MY Renewable Diesel in Belgium

**The launch follows the introduction of Neste MY Renewable Diesel on the Dutch market in October 2019 with EG Group.**

Finnish energy company Neste launches its renewable diesel in the Belgian market. The fuel, produced from 100% renewable raw materials, is brought to the Belgian market in collaboration with the channel partner EG Group.

"This expansion is another important step in the execution of our growth strategy globally. We are very excited to expand our renewable diesel offering in Europe and especially in Belgium, a country which is at the heart of Europe. We firmly believe that all solutions are needed to reduce transportation-related emissions and support the sector's contribution to the EU-level target of reaching carbon-neutrality by 2050," says Peter Vanacker, President and CEO at Neste.

"Following the success in the Netherlands, we are looking forward to entering the Belgian market and supporting the customers to reduce their greenhouse gas emissions immediately," says Jurgen Artz, EG Fuel Director - Europe from EG Group.

The launch follows the introduction of Neste MY Renewable Diesel on the Dutch market in October 2019. The fuel is currently available at more than 100 stations throughout the Netherlands and more than 500 locations worldwide.

Besides Belgium, Neste MY Renewable Diesel is available for customers in the Netherlands, Finland, Sweden, Estonia, Latvia, Lithuania and the United States in California and Oregon.
