ENOC Link rolls out new mobile fuelling service across UAE

The eLink Station, “a world-first”, is designed to reduce the time needed to deploy a station, as well as to reduce space requirements.

ENOC Link, the digital mobile fuel delivery service for businesses in the United Arab Emirates (UAE) by ENOC Group, is planning to roll out its new and world-first eLink Station across the UAE. The eLink Station is a mobile fuelling format that will enable motorists and customers access to fuelling, according to a company’s press release.

The refuelling service solution is designed to reduce the time needed to deploy a station, as well as to reduce space requirements for a traditional fuel station. The mobile station implement carbon fiber “wings” to give customers shade while fuelling.

ENOC Link’s eLink Station is equipped with a 30,000 litres tank and can fuel up to four vehicles simultaneously. The mobile station will offer consumers a supply of Special 95, Super 98, diesel and Biodiesel.

“We’ve launched our compact station to cater to consumers living in remote residential locations and now, we’ve extended our ENOC Link operations to cover consumers and motorists with our world-first eLink Station,” says Group CEO, ENOC, Saif Humaid Al Falasi.
