## UNITI expo: Hectronic presents future-oriented solutions for alternative fuels and e-mobility

As a provider of authorisation and payment systems for alternative fuels such as LNG, hydrogen and electricity, we are looking forward to presenting our product innovations at the UNITI 2022. Digital solutions in particular play a major role for Hectronic — for example our SaaS (Software as a Service) solutions as well as our mobile payment platform and app solutions.

We also have a lot to offer when it comes to hardware, of course! Terminals such as HecVision Eco and Heconomy Eco for payment and authorisation are highly flexible and can be used with CNG, LNG, hydrogen as well as electricity. Mixed operation of different energy sources can be easily managed with our terminals.

Also available: the software update eReady to make existing terminals ready for charging with

electricity! With the easy2fuel platform, we support providers of alternative fuels in bringing digital solutions to their stations — whether mobile payment or digital fleet cards. Our digital solutions are module-based and can be adapted to different customer needs.

Alternative fuels require specific operating procedures and corresponding safety instructions. These are subject to constant changes and legal regulations, to which we react with foresight. Therefore, Hectronic's fuelling systems have consequently been adapted to the strict requirements of alternative fuels. The HecVision Eco terminal was developed especially for this necessity: releasing different fuels and providing different procedures in one terminal. Of course, our digital solutions such as our easy2fuel app are also adapted to the specific operating and authorisation processes of alternative fuels.

Hectronic has many years of experience in implementing secure payment standards such as the secure transmission of transactions. We are now bringing this know-how from the fleet card business to the world of electric charging. In addition, the solutions are characterised by a high degree of flexibility. With Hectronic, operators can integrate all forms of energy — whether alternative fuels such as LNG and hydrogen or electricity — into one authorisation and billing system. A single authorisation medium is all that is needed, regardless of the vehicle, the location or the form of energy. Tomorrow's world will be a diverse energy mix with many mobility solutions. We are ready to help operators reduce complexity and make processes as simple as possible.

Besides payment and authorisation solutions for alternative fuels, we are also a reliable partner regarding tank content management with more than 65 years of experience. Our smart software solutions complement the proven hardware components and open up new possibilities with respect to economic efficiency and user-friendliness. Our new Mineo 2 Controller Touch and our OptiLevel HLS Probes set new industry standards. Accompanied by management software HecPoll and the tank content management software PetroLine ATG we are able offer a comprehensive system solution.

**Learn more about our innovative products and visit us at the UNITI expo in Stuttgart from May 17 — 19, 2022. You will find us in hall 5 (booth 5A14) and in hall 1 (booth 1E60).**
