

Dover Fueling Solutions launches its first hydrogen dispenser in EMEA

Dover Fueling Solutions (“DFS”), a part of Dover Corporation and a leading global provider of advanced customer-focused technologies, services and solutions in the fuel and convenience retail industries, is proud to announce the launch of its brand-new, technologically-advanced dispenser for hydrogen. With multiple configuration possibilities and a broad range of options, the DFS Hydrogen dispenser, which has been built following DFS’ acquisition of LIQAL B.V. through a combination of DFS and LIQAL technology, can meet even the most specific requirements for a broad range of applications, from heavy-duty vehicle refuelling to fuel retailing.

Leveraging decades of hydraulic innovation to make the refueling process safe and dependable, the DFS Hydrogen dispenser is designed for reliable performance with a low total cost of ownership. It is a modern and modular dispenser, which provides simultaneous filling from two nozzles in any combination of H35 and H70 dispensing pressures to deliver optimal and continuous hydrogen dispensing. This model also benefits from IoT technology for remote monitoring, as well as being built ready to connect to DFS’ advanced eco-system, including solutions for billing, customer loyalty schemes and payment.

The DFS Hydrogen dispenser offers an intuitive and rich user experience using digital screens to guide the user through the refuelling experience safely and efficiently, as well as providing station owners with advanced tools to engage and interact with their customers by unlocking powerful promotional strategies and loyalty programs right at the dispenser, in order to help boost sales and profits.

The DFS Hydrogen dispenser supplements DFS’ established alternative energy portfolio, which also includes compressed natural gas (CNG), liquid petroleum gas (LPG) and liquid natural gas (LNG) dispensers. The expansion into hydrogen technology further demonstrates DFS’ strategic intent to offer leading products and solutions in the alternative energy sector, to power the next era of mobility and heavy-duty transportation.

"The launch of the DFS Hydrogen dispenser is another great example of our versatility, as we continue to support the energy diversification, through innovative products and complete solutions, within the industry," said Soren Powell-Holse, Director of Product Marketing, DFS EMEA. "At DFS, we consider hydrogen an essential part of the decarbonized energy mix and predict it will become one of the mainstream fuels for heavy duty transport, as well as light vehicle passenger cars, next to electricity in years to come."

LIQAL CEO, Jorg Raven added, *"I am very proud to announce our new hydrogen fueling dispenser that surely will set a new standard in the market. In the last months, our teams of LIQAL and DFS have worked hard to achieve this. This product will bring the best fueling experience for our customers in this new market".*
