

Fine sheen for corporate design

The new **ALUCOBOND®terra** surfaces with a crystalline matt sheen that changes with the light

Stone and crystal stand for endurance, authenticity and intrinsic value. They reflect light in a magical, vibrant way and their texture is unexpectedly varied: ranging from rough to smooth. ALUCOBOND®terra is inspired by iridescent stone. The décor's surface refracts the daylight creating a matt sheen and lustrous hues, sometimes elegant and sometimes earthy. ALUCOBOND®terra unites the typical crystalline surface and velvety feel found in natural stone with many of the advantages of ALUCOBOND® composite panels. Unlike most natural stone, ALUCOBOND® composite panels are both very thin and light, but offer at the same time a high level of flexural and tensile strength. Large format panels can be easily and accurately fabricated, processed, transported, installed, and, in addition, three-dimensionally shaped by using folding and roll bending techniques. Unlike many stone surfaces, ALUCOBOND®terra is also weather-resistant and colour fast.
