

LCM Environmental appoint new Chief Operating Officer

LCM Environmental Ltd has announced that Darcy Lane has joined their senior management team as Chief Operating Officer.

Previously with Aircraft Services International Group (ASIG), Darcy has had total responsibility for fuel operations at Gatwick International Airport and previously at Charlotte International Airport, the US' fourth largest airport.

"This is a significant appointment for LCM as we continue to invest in the foundations for growth over the next five years," commented Mark Orr, Managing Director at LCM. "Out of a high quality shortlist Darcy stood out with his customer first attitude, understanding of fuel and experience of delivering innovation to improve value."

LCM Environmental works exclusively in the downstream fuels industry delivering products as diverse as fuel asset decommissioning at the end of its life, to cleaning tanks on terminals and on forecourts, to fuel quality management.

"I am delighted to join LCM at an exciting time of evolution within this growing company. Having worked at a senior level in ASIG, I was seeking something within the fuels environment but away from airports," says Darcy Lane.
