

Implico and SAP's 'digital' fuel stations at Best Practices for Oil & Gas 2016

International software and consulting company Implico will showcase pioneering SAP solutions for the downstream sector at this year's Best Practices for Oil & Gas conference.

The company will be joining other oil and gas and technology leaders to share best practices and cost effective solutions at the trade fair, which will be held on September 12 -15 at The Woodlands Waterway Marriott Hotel & Convention Center, Texas, United States.

Aside from offering advice to companies on digital transformation processes, Implico will showcase the software SAP SDM (Secondary Distribution Management for Oil & Gas), which enables users to manage and optimize the entire order-to-cash process, and SAP RFNO (Retail Fuel Network Operations), a solution that enables service station operators to monitor and manage all cash and volume flows in their networks.

The downstream experts are pursuing the "Connected Fuels" strategy together with SAP to develop solutions that efficiently automate the entire oil and gas process chain.

"We help companies leverage the opportunities of a digital future today, such as automating business processes and networking all of the market participants in their supply chain," said Thomas Weggelaar, CEO of Implico in the United States in a company release.

One customer of Implico is the Canadian service station operator F. Dufresne Group. The Canadian company's digital transformation project, which is currently undergoing integration testing, has been coordinated and overseen by Implico from strategy consulting to implementation.

F. Dufresne Group's CIO Pierre-Olivier Dufresne will also be in the event to present "Automate Service Station Fuels Retail Business."
