

How to fill up a hydrogen-powered car

Niklas Iwan, Managing Director of H2 Mobility, shows how to refill a hydrogen-powered car.

At a pressure of 700 bar, it takes about three minutes to fill a hydrogen tank. Hydrogen stations can be delivered as turn-key units and integrated into conventional filling stations.

By 2023 H2 Mobility plans to install up to 400 hydrogen refuelling stations in Germany. If the company was to reach those numbers, it would signify the world's largest network of hydrogen stations.
