Bulletin Mepsan July-August 2016

1. Mepsan Is on the World Stage

Mepsan introduced its newest products and solutions in fuel station technologies at the trade show Stuttgart UNITI Expo 2016

Mepsan presented its next-gen products and technologies developed for the fuel stations of the future at UNITI Expo 2016 Trade Show held in Stuttgart from 14 to 16 June 2016, which made the company one of the most visited ones at the show. Mepsan introduced to the visitors at Uniti Expo 2016 its

innovative solutions that aim to create differentiation in fuel stations - as more intensively focused on by Mepsan - and loyalty among customers. Introducing the first time the Smartline Diesel and Adblue Combo fuel dispensers that are developed for the retail market, Mepsan also exhibited at its stand its new product Smartline C ALL-IN-ONE refueling system which combines in a single dispenser products such as vehicle identification applications or fleet management on the network of corporate customers. Incorporating identity recognition technologies such as RFID card and UHF tag, the Smartline C ALL-IN-ONE refueling system that integrates Stawiz tank automation system, data input terminal and Stawiz POS handheld terminal was greatly appreciated by the participants. Smartline C ALL-IN-ONE that integrates and controls all fuel management and remote monitoring systems in a single product is a unique and reliable product for industrial and commercial users. In addition, the new communication interface "to.the.point" that facilitates monitoring, communication and control of all station services was also introduced to visitors.

UNITI Expo 2016 was a successful event for Mepsan, where the company came closer to its objective of rising to the top, established new international business contacts, and presented its newest products in its vision of developing the fuel station of the future.

2. Security Meets Efficiency

The world's first monobloc hydraulic design LPG dispenser by Mepsan

One of the top manufacturers of LPG dispensers worldwide, Mepsan introduced the world's first LPG dispenser with monobloc hydraulic design in UNITI Expo 2016, the largest trade show of Europe in fuel station technologies. In developing this new dispenser, Mepsan had safety, ease of service and functionality in mind. By adopting a monobloc design, Mepsan eliminates the connectors among hydraulic units, minimizing the risk of leakage. Thus, it becomes one of the safest dispensers of the sector. Started to be installed only recently in Turkey, Mepsan LPG Dispensers minimize the risk of leakage, and offer maximum safety and efficiency for all facilities.

3. Mepsan Grows in New Markets

Mepsan Has Included Ivory Coast in its global distribution network

Mepsan has signed a new distributorship agreement with a leading distribution company of Ivory Coast located in Western Africa. Upon the negotiations for dispenser purchases, first purchase orders have been received for the Smartline Series C and R fuel dispensers that bring together a smart design and functionality and offer investment and operation efficiency. The first shipment of Smartline series dispensers will take place at the end of July. The dispensers will be installed in August.

4. A Distinctive Project From Mepsan For Onduline Avrasya!

Onduline Avrasya, the representative of Onduline Group in Turkey, which is the world leader in manufacturing cellulose-mineral based roofing and siding sheets, chose Mepsan for its plant located in Adapazari.

Mepsan Industex Series Type D Industrial Fuel Dispenser boosts the productivity of Onduline Avrasya at the production plant in Adapazarı. The forklifts within Onduline Avrasya are refuelled by means of this dispenser. In addition, the Stawiz Automation System installed on the dispenser helps tracking online all reports from the vehicle at the plant.

Stawiz Automation System transmits the informations generated at the site instantly to the central office. Besides, this data can be accessed from any point without any limitation of time and location, thanks to 100% web-based operation management architecture. The ID Chip installed on the vehicles via Stawiz Vehicle Identification System ensures safe refuelling at the filling station.

5. Mepsan Secures Akpet Contract!

Mepsan wins Akpet Gas Autogas Delivery and Installation Services, LPG Dispenser Purchase Tender

Mepsan Baseline Log Dispensers will deliver services to the customers of Akpet Gas at Akpet Gas stations for a period of 2 years, following the LPG Dispenser Purchase Tender. Baseline LPG Dispensers deliver an absolute precision and accuracy, thanks to their modular electronic structure and the smart pulser method integrated with high-performance precision meters.
