

Leighton O'Brien and Wolftank Adisa announce partnership

Leighton O'Brien, a leading fuel software and field technologies company, has announced a strategic partnership with Wolftank Adisa Group, a leader in storage tank corrosion protection and leak prevention technologies.

Wolftank will become a Licensed Service Partner for Leighton O'Brien's market-leading leak detection and fuel restoration technologies throughout Western Europe and complements Wolftank's existing suite of tank lining technology solutions.

"Our leak detection and cleaning solutions complements their premium monitoring and cleaning offerings to provide a comprehensive, best in class technology suite to help fuel retailers optimise their fuel tank and equipment assets, prevent leaks and ensure optimum health of their tanks systems," says Reed Leighton, CEO Leighton O'Brien.

Reed Leighton said the partnership will enable Leighton O'Brien to introduce and market its technology suite throughout Western Europe, as well as market and support Wolftank's technology portfolio in the Asia Pacific region.

"This partnership also enables us to extend our cleaning solutions for tanks in operation to remediate microbial growth, phase separation and water contamination," comments Dr. Peter Werth, CEO of Wolftank.
