Puma Energy's 100th fuel terminal comes from BP

Puma Energy has signed a purchase agreement with BP to buy its bulk storage terminal in Belfast, Northern Ireland.

The acquisition will bring the number of Puma global network of terminals to 100 and further increase its presence in the European market, according to a company release.

The Belfast Terminal, located between George Best Belfast City Airport and Belfast Harbour, has 20 bulk fuel storage tanks with a working capacity of ca. 143 000 m3. It can store fuel and other petroleum products and provide fuel supply to aircrafts and MR vessels.

"This deal marks an additional milestone in the growth of our business, further supporting Puma Energy's position as one of the largest independent, integrated midstream and downstream companies operating today," said Puma Energy's CEO Pierre Eladari.
