

ISTOBAL launches its new ISTOBAL M'NEX32 rollover: cutting-edge technology and user experience

ISTOBAL launches the new ISTOBAL M'NEX32, taking a step ahead in its state-of-the-art M'NEX rollover range. Relying on the latest technology, the development of this machine by the Spanish company has paid special attention to offering an extraordinary car wash experience while ensuring maximum efficiency and top quality, in line with the ISTOBAL brand. The new model incorporates the latest features and innovative optional extras for excellent vehicle care, turning the wash process into a show.

High technology and efficiency

The new [ISTOBAL M'NEX32](#) rollover offers greater wash precision thanks to the pneumatic tilting of the vertical brushes in two directions, to wash the most difficult vehicle shapes. In addition, a new-generation system for flexible programming means each wash program can be personalised and configured from scratch. Speeds, dosing pumps, light signs, and all functions can be set in line with customer needs.

The rollover also offers a drying choice with maximum efficiency and minimum consumption including: a full dry, a horizontal dry, and Smartflow - a system patented by ISTOBAL which substantially reduces power use and noise levels during the drying process. A variety of high-pressure pre-washes prepare the vehicle to improve the outcome of the brush wash, and the underchassis wash systems take this very complete rollover to the forefront of design and innovation.

A user-experience focus

Improving the user experience has also been key in the development of the new model. The [Infinite mousse arch](#) supplies high-density foam, bright colours, and a pleasant fragrance. Additionally, the Spanish car wash leader has incorporated the latest lighting technologies with LED screens to dynamically indicate the different car wash phases and LED centring guides that facilitate the positioning of the vehicle.

Effective and environmentally friendly chemicals

The foam brushes fitted on the ISTOBAL-patented securing system and the ISTOBAL esens® chemicals add value to the new rollover, increasing the efficiency of the facility. Chemical pre-washes such as an insect remover or a rim cleaner, active foams that remove stubborn dirt and provide shine and protection, state-of-the-art waxes such as Glossy Tears - a drying wax that repels rainwater - and a number of super-concentrated scents to customise the car wash experience contribute to optimising each service. In addition, *Swan*, the ecolabel of Nordic countries and one of the most important and demanding sustainability certifications worldwide, certifies that ISTOBAL esens® products meet the highest environmental criteria.

Maximum connectivity

In terms of connectivity, ISTOBAL M'NEX32 offers complete centralised control of the facility thanks to the high capacity and high processing speed of the Siemens controller. With native Profinet connectivity, the rollover can be connected to the Internet and facilitate maintenance, and the touch screen -built into the command post- makes it easier and more user friendly to connect and control all the options installed.

Cutting-edge design and customisation

The new ISTOBAL M'NEX32 rollover is available in three wash heights, each of them with two different widths. Its hot-dip galvanised steel structure provides stability and robustness. The structure can be

customised with different lights and fairing models like the new futurist-style horizontal fairing.

All this makes **ISTOBAL M'NEX32** the most complete, efficient and spectacular rollover.
