

## Clean Energy's Redeem sales reports double digit growth in 2017

**The company continues its position as North America's largest provider of renewable natural gas.**

Clean Energy Fuels Corp. announced today that sales of Redeem, its renewable natural gas offering (RNG), grew by 32% in 2017, from 60 million gallons in 2016 to 79 million gallons in 2017.

The 2017 volume from Clean Energy represents over half of the overall United States RNG production as reported by the Environmental Protection Agency through December.

"We are the leading provider of RNG in North America and as more fleets seek out the economic and environmental benefits of RNG as a vehicle fuel, we are well positioned to maintain and increase that lead in 2018," said Tyler Henn, vice president and general manager of Clean Energy Renewables.

Clean Energy also announced today that it had been awarded a three-year Redeem RNG fueling agreement with North County Transit District (NCTD), the public transportation provider in North San Diego County, California, servicing 11 million passengers annually.
